

Nano Twitter 0.4 update

Team xx

What went well:

- 1 We have implemented all the basic functionalities,
- 2 We have designed a clean, nice UI. Check
- 3 We have successfully deployed it to Heroku

Check <https://nano-twitter-xx.herokuapp.com/> and welcome to register!

- 4 We have written test interfaces
- 5 We just started to use code ship
- 6 We have made some simple load test on Loader.io

Challenges and problems remain

1. Since we are a group of two, we haven't implemented all the functionalities that we designed at first. (but the core functionalities are done)
2. Currently, we have not implemented all the test interfaces yet.
3. No technical problems for now.
